Awarded second place in the 2017 AJN Book of the Year Awards in the Critical Care-Emergency Nursing category. Provide the best possible emergency cardiovascular care — using the newest ECC guidelines! ACLS Study Guide, 5th Edition offers a complete, full-color overview of advanced cardiovascular life support. An easy-to-read approach covers everything from airway management to cardiac arrest rhythms and their management, electrical therapy, acute coronary syndromes, and acute stroke. In addition to the latest ACLS treatment algorithms, this edition includes case studies and hundreds of full-color photos and illustrations. Case studies present common, realistic clinical situations, helping you learn and apply skills in cardiac rhythm interpretation, medication administration, and other essential interventions. ACLS Pearls boxes offer brief explanations of complex topics and useful tips for clinical practice. End-of-chapter quizzes include answers and rationales, helping you learn and remember the most important information. Easy-to-understand approach simplifies your study of advanced cardiac life support, thanks to Barbara Aehlert ' s unique, conversational writing style. NEW! UPDATED content centers on evidence-based practice recommendations, including the 2015 American Heart Association Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care and the 2015 International Consensus on Cardiopulmonary Resuscitation and Emergency Cardiovascular Care Science With Treatment Recommendations. NEW! Improved format integrates all case studies into the appropriate chapters, so that you can apply concepts immediately to real-world situations.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

When a life is at stake, you will want to do everything you can to ensure that person makes it out alive. When CPR is needed, it is crucial to administer the procedure properly. This is where CPR Lifesaving reference guides come into play. These handy guides will let an individual know the steps needed to complete CPR. These guides help save lives in emergencies for people who haven't taken a full CPR course at their local Red Cross Station.
