Astronomy Paper Topics. Astronomy can be defined as the science that is concerned with the material universe that extends beyond the atmosphere of Earth. As a result, the topic of astronomy deals with all that which extends beyond the context of which is most familiar to humans. While advances in telescopes, satellites and space travel have allowed humans to peer beyond the Earth, the degree to which this has occurred barely touches the surface of the vastness that is outer space.

Abstract This volume contains working papers on astronomy and astrophysics prepared by 15 non-National Research Council panels in areas ranging from radio astronomy to the status of the profession. **Keywords:** astronomy, astrophysics, research, working papers, National Research Council, professional status, radio astronomy, exoplanets, detection, characterization, exoplanets, advanced undergraduates.

The methods used in the detection and characterisation of exoplanets are presented in this unique textbook for advanced undergraduates. **Big Data in Radio Astronomy: Scientific Data Processing for Advanced Radio Telescopes** provides the latest research developments in big data methods and techniques for radio astronomy. Providing examples from such projects as the Square Kilometer Array (SKA), the world's largest radio telescope that generates over an Exabyte of data every day, the book offers solutions for coping with the challenges and opportunities presented by the exponential growth of astronomical data. Presenting state-of-the-art results and research, this book is a timely reference for both practitioners and researchers working in radio astronomy, as well as students looking for a basic understanding of big data in astronomy. Bridges the gap between radio astronomy and computer science Includes coverage of the observation lifecycle as well as data collection, processing and analysis Presents state-of-the-art research and techniques in big data related to radio astronomy Utilizes real-world examples, such as Square Kilometer Array (SKA) and Five-hundred-meter Aperture Spherical radio Telescope (FAST)

What makes one scientist a good communicator and another a poor one? How communicate scientific results through adequate and efficient scientific writing? How does the editorial process of a journal function, and why do scientific papers need to be refereed? All these questions, and many more, led the Board of Directors of the leading professional journal Astronomy & Astrophysics (A&A) and its publisher EDP Sciences to organize, under the direction of Christian Sterken, the Scientific Writing for Young Astronomers courses for beginning PhD Students. This book contains a set of seven lectures that were delivered during two schools that took place in 2008 and 2009 in Blankenberge, Belgium. The contributions discuss all aspects of scientific publication, from the history and operations of A&A, its Editors' views of the peerreview and publishing processes, and the publication process as seen from the Publisher's side. Two chapters written by the A&A language editors deal with the principles of effective scientific writing. The last two contributions focus on the use of library services and large database facilities in the context of astronomical research and publication.

This is the first scholarly collection of articles focused on the cultural astronomy of the African continent. It weaves together astronomy, anthropology, and Africa and it includes African myths and legends about the sky, alignments to celestial bodies found at archaeological sites and at places of worship, rock art with celestial imagery, and scientific thinking revealed in local astronomy traditions including ethnomathematics and the creation of calendars.

Astronomers and astrophysicists are making revolutionary advances in our understanding of planets, stars, galaxies, and even the structure of the universe itself. The Decade of Discovery presents a survey of this exciting field of science and offers a prioritized agenda for space- and ground-based research into the twenty-first century. The book presents specific recommendations, programs, and expenditure levels to meet the needs of the astronomy and astrophysics communities. Accessible to the interested lay reader, the book explores: The technological investments needed for instruments that will be built in the next century. The importance of the computer revolution to all aspects of astronomical research. The potential usefulness of the moon as an observatory site. Policy issues relevant to the funding of astronomy and the execution of astronomical projects. The Decade of Discovery will prove valuable to science policymakers, research administrators, scientists, and students in the physical sciences, and interested lay readers.
