Trane air-cooled Conquest chillers have two distinct leaving water categories: • standard, with a leaving solution range of 5.5 to 18 ° C • low temperature process cooling, with leaving solution range of -12 to 18 ° C Since the leaving solution temperature below 5.5 ° C results in suction temperature at or below the freezing point of water, a glycol solution is required for all low temperature.

Trane Adaptive controls provide unmatched performance at extreme conditions. - Our high-speed centrifugal air-cooled chillers are the newest addition to the range and combine extreme efficiency, a refrigerant with <1 GWP (Global Warming Potential) value combined with the Trane legacy of reliability. Trane air-cooled chillers are the right choice for tight temperature control in virtually any application.

Air-Cooled Chillers | Trane United Kingdom

An air-cooled chiller are systems that absorb heat from the water before transferring the heat outside of the system and into the air surrounding the chiller unit. Once the heated air is transferred outside of the unit, it will lower in temperature and turn back into a liquid, which allows for a continuous cooling cycle. If you believe that your industrial application isn ' t going to produce undue amounts of heat, it ' s possible that the air-cooled chiller would be effective for you. Any ...

Air-cooled chillers are refrigeration systems used in both commercial and industrial facilities to cool fluids and/or dehumidify air. They are used in a wide variety of settings including hotels, corporate events, restaurants, sporting events, large-scale construction, industrial and manufacturing plants, and so forth.

What Is An Air-Cooled Chiller & How Does It Work?

The cooling medium, ambient air, does not require any connections. Nor does a chiller with an air-cooled condenser need a cooling tower. These installations have lower overall environmental concerns surrounding water treatment and removal. An air-cooled chiller should be the best choice for water conservation.

Water-Cooled vs. Air-Cooled Chillers

Air-cooled chillers are equipped with condensers that utilize ambient air to reduce refrigerant temperatures. Fans are used to force the air over tubing containing refrigerant and therefore eliminate heat from it. The cooled refrigerant used in chillers can then be circulated through the industrial process to achieve a cooling effect.
