An Anthropologist on Mars follows up on many of the themes Sacks explored in his 1985 book, The Man Who Mistook His Wife for a Hat, but here the essays are significantly longer and Sacks has more of an ...

An Anthropologist on Mars - Wikipedia An Anthropologist on Mars is an engaging collection of seven neurological case studies that illustrate a supposed paradox - that what is perceived as disability or neurological deficit can result in amazing adaptations that make it a kind of gift. For example, a painter sustains a brain injury that makes him unable to see colour, and after a period of initial depression and disorientation, begins to appreciate his new way of seeing, and to reproduce it in black and white art.

An Anthropologist on Mars: Seven Paradoxical Tales by ... As with his previous bestseller, The Man Who Mistook His Wife for a Hat, in An Anthropologist on Mars Oliver Sacks uses case studies to illustrate the myriad ways in which neurological conditions can affect our sense of self, our experience of the world, and how we relate to those around us. Writing with his trademark blend of scientific rigour and human compassion, he describes patients such as the colour-blind painter or the surgeon with compulsive tics that disappear in the operating ...

An Anthropologist On Mars Seven Paradoxical Tales movie an anthropologist on mars is an engaging collection of seven neurological case studies that illustrate a supposed paradox that what is perceived as disability or neurological deficit can result in

An Anthropologist On Mars Seven Paradoxical Tales [EBOOK] anthropologist on mars seven paradoxical tales is a 1995 book by neurologist oliver sacks consisting of seven medical case histories of individuals with neurological conditions such as autism and tourette

To these seven narratives of neurological disorder Dr. Sacks brings the same humanity, poetic observation, and infectious sense of wonder that are apparent in his bestsellers Awakenings and The Man Who Mistook His Wife for a Hat. These men, women, and one extraordinary child emerge as brilliantly adaptive personalities, whose conditions have not so much debilitated them as ushered them into another reality.

Neurological patients, Oliver Sacks once wrote, are travellers to unimaginable lands. 'An anthropologist on Mars' offers portraits of seven such travellers—including a British Columbia surgeon consumed by the compulsive tics of Tourette's syndrome unless he is operating; an artist who loses all sense of colour in a car accident, but finds a new sensibility and creative power in black and white; and an autistic professor who cannot decipher the simplest social exchange between humans, but has built a career out of her intuitive understanding of animal behaviour.

In this book, we have hand-picked the most sophisticated, unanticipated, absorbing (if not at times crackpot!), original and musing book reviews of "An Anthropologist On Mars: Seven Paradoxical Tales." Don't say we didn't warn you: these reviews are known to shock with their unconventionality or intimacy. Some may be startled by their biting sincerity; others may be spellbound by their unbridled flights of fantasy. Don't buy this book if: 1. You don't have nerves of steel. 2. You expect to get pregnant in the next five minutes. 3. You've heard it all.

Portraits of seven neurological patients, including a surgeon affected by Tourette's syndrome, a colour blind artist and an autistic professor who cannot decipher social exchanges between humans but whose career involves intuitive understanding of animal behaviour. The author shows us a new perspective on the way our brains construct our individual worlds.

Like The Man Who Mistook His Wife for a Hat, this is a fascinating voyage into a strange and wonderful land, a provocative meditation on communication, biology, adaptation, and culture. In Seeing Voices, Oliver Sacks turns his attention to the subject of deafness, and the result is a deeply felt portrait of a minority struggling for recognition and respect—a minority with its own rich, sometimes astonishing, culture and unique visual language, an extraordinary mode of communication that tells us much about the basis of language in hearing people as well. Seeing Voices is, as Studs Terkel has written, "an exquisite, as well as revelatory, work."

[[Illuminate[s] the complexities of the human brain and the mysteries of the human mind.]] The New York Times To many people, hallucinations imply madness, but in fact they are a common part of the human experience. These sensory distortions range from the shimmering ziggags of a visual migraine to powerful visions brought on by fever, injuries, drugs, sensory deprivation, exhaustion, or even grief. Hallucinations doubtless lie behind many mythological traditions, literary inventions, and religious epiphanies. Drawing on his own experiences, a wealth of clinical cases from among his patients, and famous historical examples ranging from Dostoevsky to Lewis Carroll, the legendary neurologist Oliver Sacks investigates the mystery of these sensory deceptions: what they say about the working of our brains, how they have influenced our folklore and culture, and why the potential for hallucination is present in us all.

In his most extraordinary book, the bestselling author of Awakenings and 'poet laureate of medicine' (The New York Times) recounts the case histories of patients inhabiting the compelling world of neurological disorders, from those who are no longer able to recognize common objects to those who gain extraordinary new skills. Featuring a new preface, Oliver Sacks's The Man Who Mistook His Wife for a Hat tells the stories of individuals afflicted with perceptual and intellectual disorders: patients who have lost their memories and with them the greater part of their past; who are no longer able to recognize people and common objects; whose limbs seem alien to them; who lack some skills yet are gifted with uncanny artistic or mathematical talents. In Dr. Sack's splendid and sympathetic telling, his patients are deeply human and his tales are studies of struggles against incredible adversity. A great healer, Sacks never loses sight of medicine's ultimate responsibility: the suffering, afflicted, fighting human subject.]]

From the best-selling author of Gratitude and On the Move, a final volume of essays that showcase Sack's broad range of interests--from his passion for ferns, swimming, and horsetails, to his final case histories exploring schizophrenia, dementia, and Alzheimer's. Oliver Sacks, scientist and storyteller, is beloved by readers for his neurological case histories and his fascination and familiarity with human behavior at its most unexpected and unfamiliar. Everything in Its Place is a celebration of Sack's myriad interests, told with his characteristic compassion and erudition, and in his luminous prose.
