If in doubt, call a wildlife rescue centre for advice. Leave it alone. Sometimes a wild animal is not injured but has been left by a parent so it can gather food. For example, young deer should not be touched nor should fledgling birds unless they are in danger. Let the animal recover from shock in a cool, dark place.

Updated throughout, the 7th edition of Bradt's Antarctica: a Guide to Wildlife is the most practical guide to the flora and fauna available for those 'going south'. Celebrating the amazing and often unique species of this spectacular environment, the title features chapters on the region's famous whales and penguins, and also on lesser known species such as skuas and sheathbills, with full coverage of plumage and identification. Each chapter is accompanied by vibrant illustrations from Dafila Scott to help bring species to life. Tony Soper's immaculate and engaging text remains the indispensable choice for the intrepid wildlife enthusiast. Antarctica's wildlife is under threat. The Southern Ocean is warming and the most obvious effect is on the continental ice shelves. Spectacular retreats and monster carvings from the west coast of the peninsula have been seen in recent decades. Less ice means fewer krill, which depend on the ice-edge for the algae which nourish them. In turn, this will impact on seal and whale numbers. In the case of penguins, while kings and macaronis, for instance, are doing well, the magnificently adapted and truly Antarctic species, Adélie's and emperors, are in decline. In the case of emperors, maybe by as much as 50%. Bradt's Antarctica not only helps you to identify and understand species and habitats, it also explains the issues faced by this extraordinary continent, regarded by many as one of the most precious places on the planet.

As concern for the welfare of species like honey bees and monarch butterflies grows alongside awareness of the impact of climate change, inspiring the next generation of citizen scientists is more important than ever. With Wildlife Ranger Action Guide, kids can make the world better for the animals and insects they love, starting right in their own backyards. Dozens of hands-on activities and habitat creation projects, such as making a frog pond from a kiddie pool, planting a pollinator garden for bees, painting a bat house, and building a lodge for lizards, encourage children to learn about and take an active role in protecting local wildlife. Lively photographic field guides covering 78 North American wildlife species teach kids about the habits and habitats of each and include tips for providing the plants and food needed for their survival.
