The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a

Access Free Industrial Revolution A Documentary History The Boulton And Watt Archive And The Matthew Boulton Papers From

sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world.

The British Patent System during the Industrial Revolution 1700–1852 presents a fundamental reassessment of the contribution of patenting to British industrialisation during the eighteenth and nineteenth centuries. It shows that despite the absence of legislative reform, the British patent system was continually evolving and responding to the needs of an industrialising economy. Inventors were able to obtain and enforce patent rights with relative ease. This placed Britain in an exceptional position. Until other countries began to enact patent laws in the 1790s, it was the only country where inventors were frequently able to appropriate returns from obtaining intellectual property rights, thus encouraging them to develop the new technology industrialisation required.

This three-volume set concludes ABC-CLIO's groundbreaking series on the Industrial Revolution as it played out in the United States, offering volumes on the communications industry and the agriculture and meatpacking industries--plus a concluding overview volume on the causes, courses, and interconnections among the industries that brought such dramatic change to our lives. * Sidebars take readers deeper into fascinating topics, such as the role of the railroads in the rise of Chicago's meatpacking industry and in the spread of the telegraph * Biographical sketches of larger-than-life entrepreneurs including Samuel F. B. Morse, Cyrus McCormick, and Philip Armour
