Introduction To Fuzzy Logic Using

Fuzzy logic are extensively used in modern control systems such as expert systems. Fuzzy Logic is used with Neural Networks as it mimics how a person would make decisions, only much faster. It is done by Aggregation of data and changing into more meaningful data by forming partial truths as Fuzzy sets.

Introduction to Fuzzy Logic. It is an approach of reasoning to make decisions by the humans which involve digital value yes or no. It uses a fuzzy set with a fuzzy logic computer process using natural language. They are applied in rule-based automatic controllers establishes non-linear mapping and considered to be a designed method by the consumers.

Fuzzy Logic is a logic or control system of an n-valued logic system which uses the degrees of state “ degrees of truth “ of the inputs and produces outputs which depend on the states of the inputs and rate of change of these states (rather than the usual “ true or false ” (1 or 0), Low or High Boolean logic (Binary) on which the modern computer is based). It basically provides foundations for approximate reasoning using imprecise and inaccurate decisions and allows using linguistic ...

Fuzzy sets were introduced by Lotfi Zadeh (1921 – 2017) in 1965. Unlike crisp sets, a fuzzy set allows partial belonging to a set, that is defined by a degree of membership, denoted by μ , that can take any value from 0 (element does not belong at all in the set) to 1 (element belongs fully to the set).
