Application Fields Unlike the humans who are limited to visible band of electromagnetic spectrum (EM), the imaging machines cover almost the entire EM spectrum from gamma to radio waves. Thus DIP encompasses a wide and diverse fields of applications that human are not accustomed to. One efficient way is to analyze the fields based on the sources of image: Gamma ray imaging X-ray Imaging Ultraviolet imaging Imaging in visible and infrared bands Imaging in microwave band Imaging in radio band 8

Solution. This is a one-dimensional edge filter in the left/right direction which effectively produces a one-dimensional derivative of the image, i.e. it will emphasize the edges in the image. This is possible to see since the positive and negative numbers in the horizontal direction will emphasize any differences around the central pixel.
