Object Oriented – In Java, everything is an Object. Java can be easily extended since it is based on the Object model. Platform Independent – Unlike many other programming languages including C and C++;, when Java is compiled, it is not compiled into platform specific machine, rather into platform independent byte code. This byte code is distributed over the web and interpreted by the Virtual Machine (JVM) on whichever platform it is being run on.

Excellent question! In Java, the programming language wants to know what kind of information you are going to be storing in a variable.. This is because Java is a strongly typed language.. I could teach you about what the difference is between a strongly typed language and a weakly typed language, but that will likely bore you right now, so let's just focus on what a type is in Java and why ...
