The Handbook of Easy Languages in Europe describes what Easy Language is and how it is used in European countries. It demonstrates the great diversity of actors, instruments and outcomes related to Easy Language throughout Europe. All people, despite their limitations, have an equal right to information, inclusion, and social participation. This results in requirements for understandable language. The notion of Easy Language refers to modified forms of standard languages that aim to facilitate reading and language comprehension. This handbook describes the historical background, the principles and the practices of Easy Language in 21 European countries. Its topics include terminological definitions, legal status, stakeholders, target groups, guidelines, practical outcomes, education, research, and a reflection on future perspectives related to Easy Language in each country. Written in an academic yet interesting and understandable style, this Handbook of Easy Languages in Europe aims to find a wide audience.

Examining international case studies including USA, Asia, Australia and New Zealand, Laurajane Smith identifies and explores the use of heritage throughout the world. Challenging the idea that heritage value is self-evident, and that things must be preserved because they have an inherent importance, Smith forcefully demonstrates that heritage value is not inherent in physical objects or places, but rather that these objects and places are used to give tangibility to the values that underpin different communities and to assert and affirm these values. A practically grounded accessible examination of heritage as a cultural practice, The Uses of Heritage is global in its benefit to students and field professionals alike.

This volume offers theoretically informed surveys of topics that have figured prominently in morphosyntactic and syntactic research into Romance languages and dialects. We define syntax as being the linguistic component that assembles linguistic units, such as roots or functional morphemes, into grammatical sentences, and morphosyntax as being an umbrella term for all morphological relations between these linguistic units, which either trigger morphological marking (e.g. explicit case morphemes) or are related to ordering issues (e.g. subjects precede finite verbs whenever there is number agreement between them). All 24 chapters adopt a comparative perspective on these two fields of research, highlighting cross-linguistic grammatical similarities and differences within the Romance language family. In addition, many chapters address issues related to variation observable within individual Romance languages, and grammatical change from Latin to Romance.

The Anthropocene has become a field of studies in which the influence of human activity on the Earth System and nature is both the main threat and the potential solution. Social Representations Theory has been evolving since the 1960s. It links knowledge and practice in everyday life and is an effective way to deal with systemic crises based on common sense. This book assembles key contributions by Latin American scholars working with social representations in the social sciences that are of conceptual relevance to the study of the Anthropocene and that investigate the societal consequences of complex interrelations between common sense and topics of global relevance, such as the contradictions of sustainable development, the construction of risks beyond risk-perception, health, negotiation and governance in the field of education, gender equality, the usefulness of longitudinal and systemic

ethnography and case studies, and agency and the link between inequality, crises and risk society in the context of COVID-19, presenting theoretical and methodological innovations from Spanish, Portuguese and French research that have rarely been available in English. • This is the first book to address the relevance of Social Representations Theory for the Anthropocene as a societal era • It presents the multidisciplinary scope of Social Representations • This book covers emerging research contributions in Social Representations Theory from Latin America • This book presents innovative research and commentaries by established researchers in the field • This multidisciplinary book should be in the libraries of many disciplines in the social sciences and humanities

European and North American researchers and scholars of child development and learning, psychology, linguistics, and education present 20 contributions addressing research and practice on literacy teaching and learning. Organized into four sections, the volume first presents a collection of studies on the development of reading and spelling which bring together questions about how children learn and how literacy should be taught. It then concentrates on children who find the acquisition of literacy particularly difficult. Consideration is given to how teachers and teacher educators use theories about literacy acquisition, followed by consideration of questions related to the assessment of children's progress in literacy and the design of literacy instruction. Each section is preceded by a brief introduction that evaluates some of the main issues across the chapters. Annotation copyrighted by Book News, Inc., Portland, OR

Drawing on a number of case studies from around the world, this publication considers how the local knowledge and practices of indigenous fishing communities are being used in collaboration with scientists, government managers and non-governmental organisations to establish effective frameworks for sustainable fisheries science and management. It seeks to contribute towards achieving the goal of establishing international responsibility for the ethical collection, preservation, dissemination and application of fishers' knowledge.

This book explores the racial rules that are often hidden but perpetuate vast racial inequities in the United States.

The first science fiction course in the American academy was held in the early 1950s. In the sixty years since, science fiction has become a recognized and established literary genre with a significant and growing body of scholarship. The Cambridge History of Science Fiction is a landmark volume as the first authoritative history of the genre. Over forty contributors with diverse and complementary specialties present a history of science fiction across national and genre boundaries, and trace its intellectual and creative roots in the philosophical and fantastic narratives of the ancient past. Science fiction as a literary genre is the central focus of the volume, but fundamental to its story is its non-literary cultural manifestations and influence. Coverage thus includes transmedia manifestations as an integral part of the genre's history, including not only short stories and novels, but also film, art, architecture, music, comics, and interactive media.

This book brings together contributions from researchers and community workers from thirteen countries of the world. Juxtaposing academic case studies with accounts from activists and fisheries workers, it points to the ways in which globalization and associated resource degradation, privatization, and the concentration of ownership and control in fisheries are jeopardizing the lives and livelihoods of women fish workers and their families.
