Multilevel and Longitudinal Modeling with IBM SPSS by Heck, Thomas and Tabata. Already in the market for couple years, but still makes it easy for those who need results for hierarchical datasets. This book doesn't provide deep theory. Instead, it provides menu-driven and simple programing instructions to produce results.

and Anders Skrondal, looks specifically at Stata's treatment of generalized linear mixed models, also known as multilevel or hierarchical models. These models are "mixed" because they allow fixed and random effects, and they are "generalized" because they are appropriate for continuous Gaussian responses as well as binary, count, and other types of limited dependent variables.

Overview of the application of multilevel (random effects) models in longitudinal research, with examples from social research Particular focus on joint modelling of correlated processes using multilevel multivariate models, e.g. to adjust for selection bias in estimating effect of parental divorce on children's education

## Multilevel Models for Longitudinal Data

Multilevel modeling offers a unique framework for analyzing longitudinal data because. It tolerates missing waves of data; It tolerates differently spaced waves of data from different subjects; It accounts for correlations of observations across time; It allows you to study changes over time, such as changes in elevation and slope.

## Analyzing Longitudinal Data using Multilevel Modeling

Multilevel modeling examined the relationship between NAI, FHS, and depressive symptoms longitudinally. Results: NAI and FHS were both positively associated with depressive symptoms.

Multilevel and longitudinal modeling with IBM SPSS

Multilevel modeling is complicated to grasp, and turning the explanatory model into an actual analysis is a key bridge. Unfortunately, that seems to be where this book falls short. It goes over and over principles that, once you understand them, become tedious to wade through.

One application of multilevel modeling (MLM) is the analysis of repeated measures data. Multilevel modeling for repeated measures data is most often discussed in the context of modeling change over time (i.e. growth curve modeling for longitudinal designs); however, it may also be used for repeated measures data in which time is not a factor.
