Dispersal | Biology for
Majors II

Fruits play an important role in the seed dispersal of many plant species. In dehiscent fruits, such as poppy capsules, the seeds are usually dispersed directly from the fruits, which may remain on the plant. In fleshy or indehiscent fruits, the

Download Ebook Plant

seeds and fruit are commonly moved away from the parent plant together.

Fruit - Dispersal |
Britannica

Fruit contributes to seed dispersal in a number of ways. For plants, it is crucial to spread out their seeds so the new plants will

Download Ebook Plant

grow in a favorable environment. These new plants need to grow an area away from the original parent plant so they don't use up the same resources.
