Program evaluation requires attention to rationality, rigor, and careful methods. Yet precision and accuracy alone do not guarantee that program evaluations will be implemented. What prevents an evaluation from being thrown on a shelf to gather dust? Author Gerald Emison, a practitioner with more than 20 years experience, knows that the consumers of program evaluations operate in a decidedly practical and political arena where decision making is a very human and sometimes messy process. Getting students from ideas to outcomes means that knowing clients&BAD:rsquo; needs and effectively communicating results are just as crucial as an evaluator&BAD:rsquo;s theoretical knowledge and statistical analysis. Emison wants to help students translate their mastery of methodology into useable program evaluations that are implemented and affect actual programs.Short and to-the-point. Practical Program Evaluations hones in on the applied side of program evaluation, with the goal of creating and presenting program evaluations that are used and improve public enterprises. A handy supplement to core texts, Emison offers honest advice, emphasizing practices that focus on the client, content, control and communication of program evaluations.

A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources. In order to provide the most effective healthcare possible, the activities of teams of health professionals have to be coordinated through well-designed processes centered on the needs of patients. For information systems to be accepted and used in such an environment, they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient. Developing innovative approaches to design and build evidence-based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels, where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.
