classification, general properties, and applications of steel, this volume contains four major sections that describe processing characteristics, service characteristics, corrosion behavior, and material requirement

Materials covered include carbon, alloy and stainless steels;

*Page 20/34*

alloy cast irons; high-

alloy cast steels;

superalloys; titanium

and titanium alloys;

refractory metals and

alloys; nickel-chromium

and nickel-thoria alloys;

structural intermetallics;

structural ceramics,

cermets, and cemented

carbides; and carbon-

composites.

This book is a

information).

Specialty  
Handbook By J  
R Davis  
If you are involved with  
machining or  
metalworking or you  
specify materials for  
industrial components,  
this book is an absolute  
must. It gives you  
detailed and  
comprehensive  
information about the  
selection, processing,  
and properties of

# Download File PDF Stainless

materials for machining and metalworking applications. They include wrought and powder metallurgy tool steels, cobalt base alloys, cemented carbides, cermets, ceramics, and ultra-hard materials. You'll find specific guidelines for optimizing machining productivity through the proper selection of

Download File

PDF Stainless

cutting tool materials

plus expanded coverage  
on the use of coatings to  
extend cutting tool and

die life. There is also

valuable information on  
alternative heat

treatments for

improving the toughness  
of tool and die steels.

All new material on the  
correlation of heat  
treatment

microstructures and

Download File

PDF Stainless

properties of tool steels is supplemented with dozens of photomicrographs.

Information on special tooling considerations for demanding applications such as isothermal forging, die casting of metal matrix composites, and molding of corrosive plastics is also included. And you'll learn about

Download File

PDF Stainless

alternatives to ferrous

materials for

metalworking

applications such as

carbides, cermets,

ceramics, and

nonferrous metals like

aluminum, nickel, and

copper base alloys.

The rate of growth of

stainless steel has

outpaced that of other

metals and alloys, and

# Download File PDF Stainless

by 2010 may surpass aluminum as the second most widely used metal after carbon steel. The 2007 world production of stainless steel was approximately 30,000,000 tons and has nearly doubled in the last ten years. This growth is occurring at the same time that the production of stainless steel continues to

Steels Asm

become more consolidated. One result of this is a more

widespread need to

understand stainless

steel with fewer

resources to provide that

information. The

concurrent technical

evolution in stainless

steel and increasing

volatility of raw

material prices has made

it more important for the
