Understanding the FIDIC Red and Yellow Books, 3rd Edition ...

Australia's free online research portal. Trove is a collaboration between the National Library of Australia and hundreds of Partner organisations around Australia.

This work examines the International Federation of Consulting Engineers' contracts and breaks them down, making them both easier to understand and to refer to.

This work provides a detailed hands-on guide to the drafting, negotiation and interpretation of natural gas and LNG sales and transportation contracts Explains the critical components of the agreements which set out the terms between buyers, sellers, transporters and shippers, leading to the sale and transportation of gas and LNG. Discusses the nature of gas and LNG (including shales and unconventional) and the contracting process Offers clause-by-

clause commentary on the typical provisions within gas and LNG sales and transportation agreements Pinpoints the key issues and suggests solutions to problems that can arise Identifies the legal and commercial issues involved at each stage, from quality specification and force majeure to liabilities/limitations and dispute resolution, and advises how they should be handled in the contract. Provides discussion on the commercialisation of natural gas in light of recent concerns about climate change, cleaner energy sources and the security of energy supplies Includes expertly drafted precedents, also on a CD-ROM for rapid drafting Written from the perspective of English law but in the light of international experience and practice

In September 1999, FIDIC introduced its new Suite of Contracts, which included a “new” Red, Yellow, Silver and Green forms of contract. The “new” Red Book was intended to replace the 1992 fourth edition of the Red Book, with the ambition that its use would cease with time. This ambition has not materialised and is unlikely to do so in the future. Despite the importance of the 1999 Forms, there has been very little published on the new concepts adopted in them and how they interact with the previous forms. This important work considers these aspects together with the many developments affecting the fourth edition of the Red Book that have taken place since 1997, when the second edition of this book was published, and relates them to key contracting issues. It is written by a chartered engineer, conciliator and international arbitrator with wide experience in the use of the FIDIC Forms and in the various dispute resolution mechanisms specified in them. Important features of this book include: · background and concepts of the various forms of contract; · a detailed comparison of the wording of the 1999 three main forms, which although similar in nature; it nevertheless significantly differs in certain areas where the three forms diverge due to their intended purpose; · analysis of the rights and obligations of the parties involved in the contract and the allocation of risks concerned; · a range of ‘decision tree’ charts, analysing the main features of the 1992 Red Book, including risks, indemnities and insurances, claims and counterclaims, variations, procedure for claims, programme and delay, suspension, payments and certificates, dispute resolution mechanisms, and dispute boards; · a much enlarged discussion of the meaning of “claim” and “dispute” and the types of claim with a discussion of the Notice provision in the 1999 forms of contract for the submission of claims by a contractor and by an employer; · the FIDIC scheme of indemnities and insurance requirements; and the methods of dispute resolution provided by the various forms of contract; and · five new chapters in this third edition, the first four chapters deal with each of the 1999 forms and the fifth chapter is confined to the topic of Dispute Boards.

International Arbitration Law Library, Volume Number 57 Collaboration between multiple parties from different countries is one of the main challenges of almost every international undertaking, and this is especially true in the case of large and complex construction projects, such as airport terminals, interchange subway stations, distribution centers, industrial processing and manufacturing facilities or hydropower plants. This comprehensive analysis of key legal issues arising from interdependencies between multiple contracts methodically lays out, from a Swiss law perspective, the way in which coordination of works in construction projects could or should occur. It also examines the legal consequences of coordination failure and various related aspects of dispute resolution. Topics covered include the following: interfaces and interdependencies across the system boundaries of multiple contracts coordination responsibilities derived from the principle of good faith and from a contextual interpretation of interdependence-related FIDIC Red Book provisions; delegation scenarios; liability for breach of contract and legal remedies in case of delay, disruption, defects, destruction and performance impossibility; direct claims against third parties; taking of evidence under substantively intertwined contracts; and coordination of interrelated arbitration proceedings. The detailed analysis draws on numerous specific real-life examples as well as illustrative Swiss and United States case law. An appendix offers very useful practice pointers. Although considering Swiss law, which is a frequent choice for the law governing international construction contracts, the analysis deals with an array of conceptual aspects of multiple contracts and coordination, thereby addressing a great number of issues beyond the limits of national law. With its practical examples, the book is sure to be welcomed by those seeking to avoid or resolve disputes to which project coordination may give rise. It will prove of particular value to practitioners negotiating international construction contracts, arbitrators, in-house counsel representing owners and contractors involved in international construction projects, members of dispute review boards and project managers.

Multi-Party and Multi-Contract Arbitration in the Construction Industry provides the first detailed review of multi-party arbitration in the international construction sector. Highly practical in approach, the detailed interpretation and assessment of the arbitration of multi-party disputes will facilitate understanding and decision making by arbitrators, clients and construction contractors.

Provides a clear and comprehensive guide to the 2017 FIDIC contracts—written by a member of the FIDIC Updates Task Group FIDIC contracts are the most widely used engineering standard form contracts internationally but until 2017 the three main forms (the Red, Yellow and Silver Books) had not been amended or updated for nearly two decades, since the first editions were published in 1999. Written by a specialist lawyer who was member of the FIDIC Updates Task Group responsible for writing the new contracts, this book examines in detail the many substantial changes they have introduced. After providing an overview the contracts are examined clause by clause with the aim of showing how each compares and contrasts with the others and how the

second editions compare and contrast with the first. The first chapter describes how the Red, Yellow and Silver Books evolved from earlier contract forms and the distinctive characteristics of each, before providing an overview of the updates, including new potential risks for both Employer and Contractor, and then examining, in the second chapter, key general provisions such as the new rules on notices and limitation of liability. Chapter 3 examines the enhanced role of the Engineer in the Red and Yellow Books/Employer's Representative's function in the Silver including the new procedure for determinations as well as the Employer's obligations and contract administration. The Contractor's obligations are considered in chapter 4 while chapter 5 examines his responsibility for design in the Yellow and Silver Books. Chapters 6 to 14 deal respectively with plant, materials and workmanship and staff and labour; time-related provisions in the three contracts including extensions of time, and the Employer's right to suspend the works; testing on and after completion and the Employer's taking over of the works; defects after taking over, acceptance of the works and unfulfilled obligations; measurement (in the Red Book), the Contract Price and payment; the new variations regime and adjustments to the Price; termination and suspension; care of the works and indemnities and Exceptional Events (previously, Force Majeure). An important feature of the new contracts is their increased emphasis on clarity in the claims process and on dispute avoidance. These topics are examined in the final two chapters, 15 and 16, which deal respectively with the new claims and dispute resolution provisions of the 2017 forms. FIDIC contracts are the most widely used standard forms of contract for international engineering and construction projects Provides a clear and comprehensive guide to the 2017 FIDIC Red, Yellow and Silver Books Written by a senior specialist lawyer and member of the FIDIC 2017 Updates Task Group responsible for writing the new contracts Accessible to those with little or no familiarity with FIDIC contracts The 2017 FIDIC Contracts is an important guide for anyone engaged in international projects, including employers, contractors, engineers, lawyers, suppliers and project financiers/sponsors.

This book is specifically written to help construction, engineering and architecture students understand the standard forms of contract (PAM, CIDB, PWD and FIDIC Red Book). It looks at the basics of construction contracts and the required actions of the parties in relation to the contract terms and conditions. The topics include contract documents, contract sum, variations, time and money extensions for delay, payments, regular progress and completion, damages for delay in completion, suspension of work, termination, subcontracting, insurances and settlement of disputes. It tries to explain, simply, the contract provisions and procedures, rights and duties of the parties involved and the typical ways in which issues on cost, time and quality are addressed. Diagrams, tables and appendices are included as they are likely to improve understanding.

Provides detailed commentary on all issues relating to construction contracts-Gives practical help on interpreting legislation and analysing judicial decisions-Up-to-date references to case law, journals and other source material -Covers UK case law and relevant decisions from Europe and overseas- Includes Commentary on JCT Standard Form of Building Contract and Nominated Sub Contract -Features key sections of Housing Grants, Construction and Regeneration Act

FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project subject to the relevant laws. FIDIC Contracts in Asia Pacific provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws for a number of the jurisdictions in which FIDIC contracts are used. The laws that apply to the governing law of the contract, construction works and dispute resolution in each jurisdiction are identified. This book offers chapters on the FIDIC Conditions of Contract for Underground Works, and the perspective of a bilateral aid agency on the use of FIDIC contracts. Each jurisdiction features an outline of its construction industry and information on the impact of Covid-19 on both the execution of construction projects and the operation of construction contracts. This book is essential reading for construction professionals, lawyers and students of construction law using FIDIC contracts.
