Vax Platinum Power Max Carpet Cleaner ECB1SPV1 | Vax ...

The Vax 6131T Multifunction Carpet Cleaner is an ideal total home cleaning system, which powerfully vacuums, washes carpets and sucks up spills. The traditional Vax tub design makes it very robust and durable. It also has an extra large capacity, a range of tools, and a FibreFlow wash head. Vacuums, sucks up spills and cleans carpets ; Large capacity for less frequent emptying; On board tools ...

This is the authoritative reference on Digital Equipment Corporation's new 64-bit RISC Alpha architecture. Written by the designers of the internal Digital specifications, this book contains complete descriptions of the common architecture required for all implementations and the interfaces required to support the OSF/1 and OpenVMS operating systems.

Alpha Architecture Reference Manual, Third Edition is the authoritative reference on the definition of Alpha architecture. Revised by the Alpha Architecture Committee, this book contains a complete description of the common architecture required of all implementations and describes the interfaces to support the Windows NT, Digital UNIX, and OpenVMS operating systems. The third edition reflects the latest implementations of the architecture, including the 21164A, 21164PC, and 21264. Some of the extensions to the architecture and the enhancement to the technical content include: new byte and word load, store and sign-extend operations; new multimedia instructions; new population enumeration and floating-point square root instructions; new instructions to improve data cache efficiency and updated Windows NT section. The Alpha chip is the fastest chip on the marketplace today. It runs Windows NT, UNIX and OpenVMS operating systems. New base-level server configurations provide four times the memory of current systems. Contains updated Windows NT section to reflect current technical port to Alpha Includes new insights into the software aspects of the implementation Covers new multimedia instructions for increased performance with high-end graphics applications

Alpha AXP Architecture Reference Manual, Second Edition describes the required behavior of all Alpha implementations, as seen by the machine-language programmer. This book discusses Alpha single-board computers, which have been introduced to cover the high-end embedded controller market. Organized into five parts, this edition begins with an overview of the instruction-set architecture. This text then describes the supporting PALcode routines for three operating systems. Other parts consider a particular console implementation that is specific to platforms that support the OpenVMS AXP or DEC OSF/1 operating systems. This book discusses as well the specific operating system PALcode architecture. The final part provides a discussion of console issues for Windows NT with its PALcode description. This book is a valuable resource for machine-language programmers.

The most authoritative and complete description of the VAX/VMS operating system. Comprehensive and convenient, this book focuses on the kernel of the VAX/VMS Version 5.2 operating system: process management; memory management; the I/O subsystem; the mechanisms that transfer control to, from,

and among these; and the system services that support and complement them.

Computer Systems Organization -- Processor Architectures.
